

INTUITION_OS_MASTER_SPEC.md

PART 7

UI/UX SYSTEM

DESIGN LANGUAGE · SCREENS · USER FLOWS · COMPONENTS

Version 1.0

DESIGN PHILOSOPHY

The product should feel like:

- A mentor
- A coach
- A learning companion

The product should NOT feel like:

- A coding platform
 - A gaming platform
 - A social network
 - ChatGPT clone
-

DESIGN PRINCIPLES

Principle 1

Clarity over decoration.

Principle 2

Learning over engagement.

Principle 3

Reflection over celebration.

Principle 4

Minimalism over complexity.

Principle 5

Insights over metrics.

VISUAL DIRECTION

Inspiration:

- Linear
 - Notion
 - Stripe
 - Vercel
-

Visual Characteristics

Typography-first.

Clean spacing.

Subtle animations.

Muted palette.

Professional.

DO NOT USE

- Neon colors
- Heavy gradients

- Gaming aesthetics
 - XP bars
 - Achievement badges
 - Confetti
 - Level systems
-

COLOR SYSTEM

Primary:

Neutral

Accent:

Single accent color

Used sparingly.

Success:

Green

Warning:

Amber

Error:

Red

TYPOGRAPHY

Font:

Inter

Hierarchy:

H1

USER FLOWS

FLOW 1

New User Onboarding

Step 1

Landing Page

↓

Install Extension

↓

Continue with Google

↓

Account Created

↓

Dashboard Opens

↓

Extension Connected

FLOW 2

Open Problem

User opens LeetCode.

Extension detects:

Problem

↓

Session Created

↓

Mentor Ready

No interruption.

No popup.

No onboarding.

FLOW 3

Need Help

User clicks Extension.

Sees:

Current Session

↓

Clicks:

Need Help

Mentor Diagnostic

Guidance

Continue Solving

FLOW 4

Problem Solved

Accepted

Session Closed

DASHBOARD

Dashboard Layout

Header
Mentor Summary
Strengths Weaknesses
Recent Growth
Recommended Problems

Header

Contains:

- User Avatar
- Search
- Settings

Mentor Summary Card

Shows:

Current Focus

Example:

"Optimization reasoning"

Current Bottleneck

Example:

"DP state transitions"

Recommendation

Example:

"Practice one additional DP problem"

Strengths Card

Evidence-backed only.

Example:

Graph reasoning.

Hash maps.

Binary search.

Weaknesses Card

Evidence-backed only.

Example:

DP dependency.

Optimization bottlenecks.

Recent Growth Card

Shows:

Improvement trends.

Examples:

Hint dependency ↓

Optimization ↑

Pattern recognition ↑

Recommended Problems Card

Personalized.

Shows:

Problem Name

Topic

Reason

Learning Timeline

Chronological session history.

Shows:

Problem

Reflection

Evidence

SESSION DETAILS PAGE

Purpose:

Inspect one learning session.

Sections

Problem Information

Session Metrics

Mentor Interactions

Reflection

DIAGNOSTIC SCREEN

Question:

What have you considered?

Options:

- Brute Force
- Hash Map
- Two Pointers
- Sliding Window
- Binary Search
- Greedy
- DP
- Graph
- Other

Second Question

Why are you stuck?

Options:

- Pattern Recognition
 - Wrong Answer
 - TLE
 - Edge Cases
 - Implementation
 - Unsure
-

MENTOR RESPONSE SCREEN

Format:

Observation

Question

Guidance

Example

Observation:

Your solution repeatedly scans the array.

Question:

Can previously computed information be reused?

Guidance:

Think about avoiding repeated work.

REFLECTION SCREEN

Shown after solving.

Layout

Session Summary

↓

Key Learning

↓

Evidence

↓

Growth Impact

↓

Next Step

Example Reflection

Summary:

Solved after one TLE.

Learning:

Identified optimization bottleneck.

Evidence:

Recovered from TLE.

Solved independently.

Next Step:

Practice another optimization problem.

EMPTY STATES

No Sessions

Message:

Start solving a problem on LeetCode.

No Reflections

Message:

Your learning history will appear here.

No Recommendations

Message:

Complete more sessions to unlock recommendations.

LOADING STATES

Use skeletons.

Never spinners when avoidable.

ERROR STATES

Friendly.

Specific.

Actionable.

Bad:

Something went wrong.

Good:

Unable to generate reflection.

Try again in a few moments.

SETTINGS PAGE

Contains:

Account

Google Connection

Privacy

Data Export

Delete Account

PRIVACY PAGE

Explain:

What data is collected.

What data is not collected.

COLLECTED

Problem metadata.

Session activity.

Mentor interactions.

Learning evidence.

NOT COLLECTED

Passwords.

Browser history.

Personal files.

Private messages.

MOBILE DESIGN

Not MVP.

Dashboard should remain responsive.

No dedicated mobile application.

ACCESSIBILITY

Required.

Keyboard navigation.

Focus states.

Contrast compliance.

Screen reader support.

FUTURE SCREENS

Not MVP.

Cross-platform Progress

Advanced Recommendations

UI SUCCESS CRITERIA

A new user should understand:

What happened?

Why it happened?

What they learned?

What they should do next?

within 10 seconds of opening the dashboard.

If the UI fails to answer those questions quickly, redesign it.
